Marietta GA,

Hiring Manager
Area I

Dear Hiring Committee:

Hi there, I am Ethan Nelson and I am currently a student at Brigham Young University-Idaho studying computer science.

There are a ton of programmers, data scientists and developers out there so what makes me different?

I embrace the challenge- I have seen too many people shrink during challenges. Challenges give us a chance to learn new skills, stretch our abilities and understand our current limits.

Recently I had the opportunity to do data manipulation with a file that was formatted terribly. I made a plan then faced the challenge head on. I was able to complete the challenge because I planned and kept my head on.

I am learnable and adaptable- I recognize that I do not possess all knowledge. I am always ready to expand what I know. I love to hear others opinions and views. Because I understand there are always things that need to be learned and change I am a quick learner.

I once bought a car that ended up needing extensive repairs. I did not have any previous experience in automotive maintenance. I found those who knew about auto repairs and together we fixed my car. I later used those skills to do a full restoration on a 1966 mustang.

Synergy and teamwork- Teamwork is important. I enjoy working alone as much as the next guy, but effective teamwork can more than double the output. I always work hard with my team even if I may not agree with what the plan or course of action is.

I did research on the effectiveness of paired programming. We found that 2 people working in a team had more than 2x the output than if both people were working separately. This was because the team members were able to catch mistakes, combine knowledge and encourage each other.

I am a hard worker, I believe that I will make a positive difference in the world and that we are in control of who we are and what we do.

I believe that my desire to design, create and improve will make me a great candidate for this position. I am very grateful to be considered for this position, and I look forward to hearing back from you.

Best regards,

Ethan Nelson
